Learning in Classrooms præsenterer en række eksempler på hvorledes undervisning i biologi, historie, matematik, fysik og sprog kan forankres i børnenes hverdagsviden, og på hvordan børn kan bruge deres erfaring fra hverdagens begivenheder i klasseværelset, således at de kommer til at have sammenhæng med skolefagernes begreber. De forskellige kapitler giver empirisk grundlag for hvorledes undervisning kan støtte børns nysgerrighed, udforskning og samarbejde så de bliver motiveret for skolens lærdom og samtidig kommer til af reflektere over hverdagens begivenheder. Det er en vigtig bog til forståelse af, hvordan pædagogisk er med til at forme børns læring i skolen.

Classrooms are found in educational institutions of all kinds, from preschools to universities, and may also be found in other places where education or training is provided, such as corporations and religious and humanitarian organizations.
